The ATA500 from Teledesign is a simple, inexpensive module (ATA) that effectively converts almost any conventional phone into a fully functional VoIP phone.

Just plug the phone into the ATA500 and connect the other directly to your network for instant fully-featured VoIP functionality.

The ATA500 requires no customer configuration. Unlike other ATAs, the design, manufacture and delivery of the device is fully integrated and controlled. It is a complete, self-configuring hardware solution that can be offered directly to customers by resellers. For further details see the Teledesign "VTMS Datasheet".
